

# Validian™ Medical Protect

**Protection** for  
clinical information  
and **patient**  
**health** records

## Introduction

As technology and digitization continue to be utilized to help contain the escalating cost of healthcare delivery, keeping electronic medical information safe is not only advisable, it is increasingly becoming mandatory.

From the exam room diagnostic to the post-op report, from the case file update to payment processing, your responsibilities lie not only in providing proper diagnosis and care but also in protecting the privacy of the health-related information in your custody.

With **Validian™ Medical Protect**, protecting file-based records such as patient diagnosis, electronic test results, X-ray, MRI or ECG outputs, and clinical research data has never been simpler or easier.

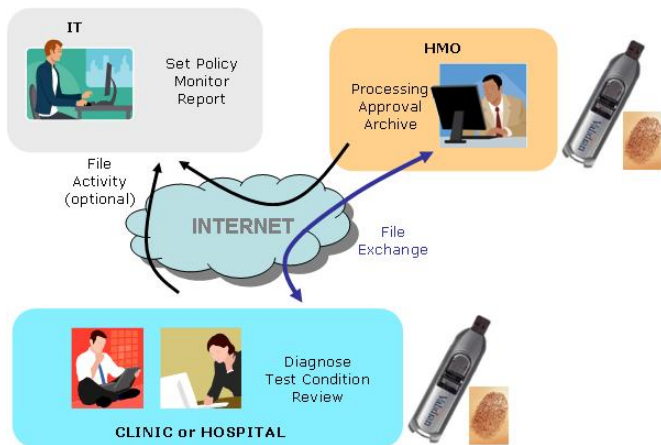

Whether your work routine has you visiting different facilities, collaborating with far-away colleagues over the Internet, or sharing sensitive information with within your clinical environment, **Validian™ Medical Protect** can keep your information safe while at rest and in transit.

The result: a convenient and flexible solution that protects the sensitive information in your care and delivers peace of mind that privacy considerations are met efficiently and cost-effectively.

## Overview

- Integrated HW/SW solution to the problem of securing access, storage and transfer of sensitive patient health information and billing records
- High capacity, standard USB drive that allows easy mobility across healthcare facilities such as hospitals, clinics, research labs and field treatment facilities and any Windows or Mac computer
- Secure access to stored content through an integrated fingerprint scanner that guarantees only permitted users from the medical team (physician, nurse, billing agent, etc.) can manipulate stored files
- Robust, on-drive encryption in case of loss or theft with no loss of performance due to security features
- Simple, intuitive and secure file sharing application that protects information exchanges over unsecured networks such as wireless hotspots and the Internet
- Selective protection of key portions of stored files based on user characteristics that ensures only the relevant portions of medical files can be viewed or altered

# Protect sensitive medical records against unwanted disclosure, loss and theft

## System Requirements

### Validian™ SecureDrive

- Windows XP, Windows Vista, MacOS 10.4 or MacOS 10.5
- 512 MB RAM
- Intel Pentium 4 or equivalent
- USB 2.0 slot (available)

### Validian™ Share Protect Server 2.0

- Windows XP, Windows Vista, Windows Server 2003 or Windows Server 2008
- 1 GB RAM
- 20 MB disk space (software-only)
- Intel Pentium 4 or equivalent

## Features

- Highly-portable, small form factor USB 2.0 drive (Validian™ SecureDrive) with 2 GB of physical storage capacity
- Accommodates files of all types, formats and sizes
- Single-sign-on allows both access to protected files and authentication to built-in file transfer and audit applications
- Support for one or up to four (4) distinct fingerprint signatures per Validian™ SecureDrive for use in individual or team scenarios
- Support for live and scheduled network transfers to other Validian™ SecureDrive (peer-to-peer) or to Validian™ Share Protect Server (client-server)
- Pause triggering and checkpoint restart for stopping/starting network file transfers from desired or communication failure points

## About Validian

Validian Corporation provides comprehensive solutions for the protection of digital assets such as corporate information, creative properties, and private records. Through innovative technology, Validian ensures the authenticity and integrity of customer data end-to-end, and while in transit or at rest. A U.S. corporation, Validian has offices in the U.S and Canada.
