
VALIDIAN CORPORATION (VLDI) is first-to-market to provide secure storage, access and transfer of Digital Information on wired, wireless or mobile networks over the Internet. Validian is a U.S. public company with offices in the United States and Canada.

Validian is the only technology that enables IT managers to change on demand encryption algorithms, keys, key life time and level of compression and to distribute these automatically, immediately and transparently to all end points without having to re-develop or re-install the software.

Business Opportunity: Validian Solves the Multi-Billion Dollar Problem in a Multi-Billion Dollar Market

Digital Information is where the value is: movies, music, sensitive Gov't and business information, and confidential medical records. EVEN MONEY IS NOW DIGITAL.

All Digital Information is stored, accessed and transferred. Valuable Digital Information should do so securely. However, existing security products protect the networks but not Digital Information. Accordingly, valuable Digital Information is being stored, accessed and transferred under protected around the world on the Internet today, resulting in trillions of dollars in losses and exposure.

- Economic losses alone from data theft and breaches exceed \$1 Trillion in 2008 (BBC News, Feb/09)
- The Entertainment Industry is losing more than \$20 Billion per year due to theft and piracy of movies and music (MPAA)
- \$7 Billion was lost by a single financial institution in 2008 due to unauthorized access (AP, Jan/08)
- Millions of credit cards & bank accounts are hacked & billions of dollars are stolen each year
 - 100 million credit & debit cards were stolen from Heartland Payment Systems in Q4/08 (Gov't Security News, Jan/09)
- Gov'ts cannot communicate sensitive information inside and outside the Gov't
- confidential patient & health records are being improperly accessed
- the trend to SmartPhones lacks security and compatibility for e-commerce
 - Apple, RIM & Google have thousands of applications for SmartPhones; none are for e-commerce (Reuters, Feb/09)

The Validian Advantage: Validian can save Business and Governments Billions of Dollars

Validian has developed a suite of first-to-market products and solutions that enable the secure storage, access and communication of Digital Information over the Internet.

- Prevent unauthorized access
- Prevent theft of Digital Information during storage and transit
- Securely transfer any form and size of data, so that Digital Information never travels in the clear
- Significantly reduce total cost-of-ownership
- Put security in the control of company administrators, instead of developers & end-users

Validian's First-To-Market Products

① Validian Protect

- Embeds Validian's technology into any application providing secure access and protection of Digital Information at rest and in transit

② Validian Media Protect

- Anti-piracy solution that protects high-value movie & music content during production and post-production

③ Validian Medical Protect

- Secure remote access & exchanges of any type of medical file between doctors, patients, hospitals, clinics, emergency responders, remote triage, research...

④ Validian Secure Microsoft SharePoint

- Enables secure content management and web portals

⑤ Validian Mobile

- Enables secure e-commerce transactions over non-compatible Smartphone devices, cell sites and networks
- Provides a ten-fold reduction in the cost of data transfer

Summary: All of the elements are in place for Validian to grow revenue and shareholder value rapidly. The company has: ① world-class digital information security products that are uniquely positioned in large and rapidly growing markets; ② a network of partners and resellers; ③ a growing pipeline of significant prospects with installations in place; and ④ a highly experienced management and sales team.
